TEAM PROJECTS

Project Name | University of Denver, Full-Stack Development   Role in Project
- 1-liner - What was the purpose or outcome of the project?
- 1-2 sentences on what the project accomplishes and your responsibilities. Be sure to specifically name technical or industry specific tools/skills utilized.

Fit with Friends | University of Denver, Full-Stack Development   Role - Exp. Handlebars, Presentation
- An application where fitness activities can be shared with friends and they can choose to join you in your adventure or leave a comment for encouragement.
- Full stack web development group project using MVC paradigm, server-side API, user authentication, and a connection to a database and deployed to Heroku. Execute git branching workflow and implement agile software development (Kanban) as a team.

Book & Coffee Finder | University of Denver, Full-Stack Development   Role in Project - Presentation
- An application for finding books & coffee shop locations using (x3) API's, Bulma, & GitHub.
- The main objective of this project is to learn how to effectively collaborate with other developers on a web application that is hosted on GitHub. To avoid conflict multiple branches are created within a single project. When conflicts arise we can learn how to deal with them as a collective.
